

Hacking List

Russ T., Toad genius extraordinaire, here. For those of you playing this game on the emulator Project 64 (for evaluation purposes only, I'm sure...*cough*), you could be smart like me and use this list, a hex editor, and a savestate to give Mario whatever stats or items you wish. Imagine how smart Mario would be if you gave him a dozen Dictionaries! Or (dare I say it) you could use this list to cheat. It's your call.

This is a list of the codes used for hacking Project 64 save states in Paper Mario. If you do not yet know how to hack save states, click [here](#) for an explanation.

** For numerical values that can take more than two hexadecimal digits (numbers over 255), to enter in a number lower than 255, use the first two spots listed. For a number between 256 and 65535 (That is, numbers that would take between 3 and 4 digits to enter), you have to put in the first two digits in the second spot, and the last two in the first.
For example, let's say you want 999 coins. That would be 3E7 in hexadecimal. There is room for 4 digits to put in the coins offset. But you must put the first two digits in the last two places, the first two digits of the hexadecimal are 03 (You must think of all these to be an even number of digits). Then put in E7 in the first two spaces. So, to get 10,000 coins you'd enter E703. It's complicated, and takes some getting used to.*

PLACES IN THE CODE

10F9EC Max HP
10F9ED Current HP
10F9EE Equipped Hammer
10F9EF Equipped Boots
10F9F1 Max FP
10F9F2 Current FP
10F9F6 Level
10F9F7 BP
10F9F8 Number of Star Pieces
10F9FA-10F9FB Number of Coins
10F9FF Number of Star Points
10FA60-10FA9F Key Items
10FAA0-10FB9F Badges
10FBA0-10FBB4 Items
10FBB5-10FBF4 Items in Storage

THINGS TO PUT INTO THE PLACES

Since there are such a large number of items in Paper Mario, each item modifier will take two offsets, rather than the usual one.

Any value not listed is dummied out, and may have adverse affects if used. Enter at your own risk.
